EXPERIENCE

QA Lead / Senior SDET - Eventric Master Tour

Jan 2025 – Aug 2026

Stack: TypeScript/JavaScript, React, React Native, Maestro, Playwright, Cypress, Jest, React Native Testing Library, Reassure, Qase, Jira, Confluence, Bitbucket, Postman/Apidog, LaunchDarkly, Bugsnag, Firebase, Slack, Figma

- Owned QA strategy and the end-to-end release process across eight products - final review, go-to-market coordination, and company-wide release status communication - reviewing 65+ release candidates and preventing 105+ escape defects
- Led a weekly, engineering-wide release review meeting reporting directly to the Head of Technology, providing go/no-go visibility on all in-flight releases across the company
- Selected and rolled out Qase as the team's manual test case tool; led the team in authoring 500+ manual test cases across 3 products, serving as a repeatable, trackable, and reportable quality gate
- Hired and led Eventric's second QA engineer, running the hiring process end-to-end with an external hiring partner
- Matured Eventric's QA function from ad hoc manual gates to a defined set of quality gates visible and enforced across the entire engineering org

Master Tour Mobile - React Native Mobile Application

- Built a Maestro E2E smoke/regression suite (100+ cases) covering all 18 critical user flows, auto-triggered on every release-candidate build in Bitbucket
- Built a Jest/React Native Testing Library component suite (50+ component specs) running on every PR, taking full mobile app test coverage from near-zero to ~30%
- Stood up Reassure performance-regression testing across core UI components (Button, Card, Accordion, and others)

Master Tour Desktop - Electron Desktop Application

- Initiated and led the rollout of a Playwright E2E framework from scratch - built auth fixtures, navigation/wait helpers, and a 31-file page-object architecture as part of a coordinated, multi-PR initiative

Master Tour Venue - Vite Web App

- Maintained a Cypress E2E suite (100+ tests) and component suite (50+ component specs), running weekly and on every deploy

Software Development Engineer in Test - Eventric Master Tour

Mar 2023 – Jan 2025

Stack: TypeScript/JavaScript, React, React Native, Cypress, Jest, React Native Testing Library, Postman, Bugsnag, Figma, Jira, Confluence, Bitbucket, Slack, Google Workspace

- Led test automation and QA efforts across 5 products, including a desktop and a mobile application
- Built a Cypress E2E automation suite from scratch covering all critical user flows (20 specs, 93 flows); integrated into CI/CD (Bitbucket Pipelines) to run on every pull request across the team's primary web product
- Built an atom/molecule-level component testing suite in the same framework and introduced it into Eventric's pipelines as a permanent quality gate for pull-request merges
- Stood up React Native Testing Library/Jest component testing for the company's new mobile product to ensure compounding quality during the early stages of app development
- Started and led a backlog-refinement initiative that reduced average backlog age across Eventric's 5 main products by 150 days
- Standardized Eventric's Confluence knowledge base (25+ docs) and created bug/story templates adopted company-wide
- Interfaced with clients and users for on-site feedback and product outreach; assisted the support team in diagnosing and mitigating high-priority user-reported issues

QA Specialist - Fubo Gaming

Jun 2022 – Nov 2022

Stack: JavaScript (Node.js, React Native), Selenium/Cucumber, Confluence, Jira, Bitbucket, Figma

- Tested the Fubo Sportsbook web app and native mobile app using both manual and automated testing
- Wrote and groomed 200+ test cases covering core flows including new-user onboarding, money deposit/withdrawal, and TV-to-sportsbook integration
- Created and maintained 15+ Confluence pages used department-wide for onboarding, feature testing standards, and general QA process
- Sole QA member supporting R&D on TV-service/sportsbook integration and third-party analytics API integration; interfaced with domestic and international teams to meet sports-betting industry standards

Software Quality Engineer - Scientific Games

Sep 2019 – Jun 2022

- Owned the full QA lifecycle for 6 video slot games, each achieving first-time approval and certification from Gaming Laboratories International (GLI)
- Subject-matter expert on Jurisdictional Chip (localization) testing - tested and released a department-high 13 titles in a single year; trained fellow engineers on the release process

EDUCATION

Bachelor of Science, Computer Engineering - Rose-Hulman Institute of Technology
